FURNITURE

Plant-based creative materials for architecture and design

Viaplant manufactures creative composite materials for architecture and design with its unique appearance determined by the use of real plant components. Our goal is to bring the beauty and diversity of nature closer, and to create values in living spaces by telling stories through plants.

The brand is fundamentally defined by its philosophy, the so-called story concept, which stems from the place of origin of the plants and the memories associated with them. This value can be conveyed by the flora of iconic places, the lawn of a famous football stadium, or the recycling of a bridal bouquet. Something that connects to us.

repurposed
mark of nature and engineering design

We re-imagined the re-use of plant parts generated and discarded during the maintenance of urban green spaces. Amongst others we also see beauty in aggressively spreading invasive species (e.g. ragweed, reed, Canadian goldenrod, etc.) as well, and re-utilise them. We only use plant parts – leaves and flowers – whose regeneration cycle is one year or less. We consider as very important the local sourcing of all our natural materials, and that the entire work process is carried out in Hungary.

visual aesthetics, experience, atmosphere
it's not 'like that', it's 'exactly that'

Viaplant does not imitate nature, but is one and the same. Using real plants, it creates texture and appearance rich in colour and detail, and emits a wholly unique atmosphere once light shines through.

timeless
always stylish

Thanks to the durable materials used and the aesthetics of nature,
Viaplant does not follow passing trends, but opts for the truly long-term.

personality
material's second layer is its story

Wall tile, specials, lamp or furniture – Where the given plant comes from and what its story is makes all the difference. A leaf from a 500-year old lime tree, turf from a famous football pitch or a recycled bride's bouquet. A certain something that we can relate to.
